Dorota Roskowska

Quality Assurance Engineer with over **13 years of experience** in software testing, test automation, and quality engineering across e-commerce, finance and e-learning domains.

Passionate about identifying issues and defects early in the development lifecycle to improve product quality, reduce costs, and enable reliable delivery. Has a proven track record of establishing QA strategies, processes and test automation frameworks from scratch, driving quality improvements across multiple projects and organizations.

Recognized for diligence, attention to detail and talent for identifying pesky edge-cases. Excellent addition to any team needing some structure and someone who is down-to-earth.

TECHSTACK

- C# (Visual Studio, Visual Studio Code, .NET, nUnit, Selenium WebDriver)
- Python (PyCharm, Robot Framework, Selenium WebDriver, basics of Playwright)
- Xpath, JSON, markdown
- Git (GitHub, Azure DevOps, Bitbucket)
- HTML, CSS, Eleventy, basics of javascript, REST API
- JIRA, Confluence, Gherkin, office software suite (spreadsheets, presentations, word processors)

LANGUAGES

- Polish (native)
- English (C2)
- German (A1)
- French (passive understanding)

EDUCATION

- College of Interdisciplinary Individual Studies in Humanities and Social Sciences, University of Silesia, 2009 — 2012 (BA in Philosophy, unfinished)
- English B2 certificate, Foreign Language Teaching Centre University of Silesia, 2011

- ISTQB Certification Foundation level, 2014

EXPERIENCE

Cyclad

Senior QA Automation Engineer

10.2020 — present

Project description:

Developed a centralized testing platform for a complex ecosystem of credit and insurance reporting systems. The solution replaced a fragmented set of legacy tools, including Ranorex, Postman, SpecFlow, and custom Java-based frameworks, with a unified C# testing ecosystem.

The desktop application enables manual QA engineers to execute Web UI and API regression test suites with minimal programming expertise, while ensuring seamless integration with automated CI/CD pipelines. This significantly improved test consistency, maintainability, and overall testing efficiency across multiple systems, reducing regression testing from a multi-day effort requiring several testers to a fully automated process that that produces reliable results within 3 hours.

Tech stack:
C#, .NET, nUnit, Selenium WebDriver, SQLite, QTest, JIRA, Azure DevOps, Bitbucket

Key responsibilities and achievements:

- Developed automated web UI and API tests, from zero to full scope coverage of core features, which reduced regression testing from a multi-day effort requiring several testers to a fully automated process that that produces reliable results within hours
- Developed and maintaining an in-house desktop testing application used by QA teams to execute automated test scenarios, replacing a complex web of several legacy tools
- Designed and implemented a scalable, layered test automation architecture from scratch, including reusable frameworks, libraries, and testing components
- Created and maintained databases for test user credentials and test data management
- Collected and archived test execution metrics, automation usage statistics and test results
- Implemented JSON-based configuration management and prepared manuals for non-technical users

- Collaborated within an Agile, self-organizing team environment, contributing to continuous improvement initiatives and delivery planning
- Developed and maintained automated Web UI and API regression test suites, expanding scope coverage from zero to full validation of critical business processes

Striped Giraffe

Quality Assurance Specialist

10.2017 — 10.2020

Project description:

Developed bespoke solutions for clients utilizing SAP systems, collaborating closely with cross-functional teams across multiple countries and external partners such as Accenture.

Tech stack:
Python, Robot Framework, Gherkin, Cucumber, JIRA, Confluence

Key responsibilities and achievements:

- Executed functional Web UI tests of bespoke modifications within SAP Hybris platform
- Designed and developed automated test solutions for end-to-end business processes and data flow validation
- Reviewed and analyzed system requirements and technical specifications
- Prepared and maintained test data, test cases, documentation, test execution reports and end-user manuals
- Performed root cause analysis and issue resolution
- Mentored a fellow QA Specialist in test automation practices, supporting their transition from manual to automated testing

Webanywhere

QA Team Leader

01.2016 — 09.2017

Quality Assurance Specialist

06.2013 — 12.2015

Project description:

Created web-based platforms for schools and educational institutions, developing new tailored solutions and enhancing existing e-learning systems.

Tech stack:
Selenium IDE, Selenium WebDriver, Java, Redmine, TestLink, Moodle, Totara

Key responsibilities and achievements:

- Performed functional Web UI tests of CMS tools, bespoke modifications for the Totara/Moodle system and cross-system integrations with Capita SIMS
- Validated the security and confidentiality of sensitive personal data processed within tested systems
- Designed and developed an automated functional Web UI and performance test suites
- Managed and mentored a team of QA Specialists (3-5 FTE) across multiple projects
- Tested implementations interacting across multiple time zones with highly time-specific events, handling high user traffic and large-scale databases (1mln overall and up to 100k concurrent users)
- Led the transition from manual to automated testing by defining automation strategy, implementing a test automation framework from scratch and mentoring other QA

Other jobs

- Flamberg foundation — Social Media Manager (2016 — 2017)
- Dobre Relacje — Copywriter (2013)
- TextPartner — Proofreader / DTP engineer (2011)
